

VISHNUPRABHA

Software Engineer

Tamil Nadu, India | +91 9344154479 | vishnukprabhak@gmail.com | vp-gray.vercel.app | linkedin.com/in/vishnuprabhak

PROFILE

Full-stack Software Engineer with 2+ years of experience architecting and delivering enterprise-grade web applications across the entire stack, from database schema design through to high-performance Angular interfaces. Specializes in building RESTful APIs with NestJS and Node.js, optimizing MySQL-backed systems, and resolving complex production issues under tight release timelines. Recognized with two promotions in under two years for consistently strong technical delivery, growing ownership of critical modules, and the ability to translate ambiguous requirements into stable, scalable software. Comfortable working across the full stack, from authentication and caching strategy to UI performance tuning for high-volume data tables.

WORK EXPERIENCE

Software Engineer

Jan 2024 – Present

Stellar Innovation • Progressed: Junior Software Developer → Junior Software Engineer → Software Engineer

Backend Development

- Designed and built RESTful APIs using NestJS, Node.js, and Express.js, structuring modular service layers for maintainability and scale.
- Modeled and optimized MySQL database schemas using Prisma ORM and Sequelize ORM to support efficient queries across high-transaction modules.
- Implemented JWT-based authentication and Redis caching to improve API response times and secure access control across services.
- Profiled and resolved backend performance bottlenecks, reducing query latency and improving system reliability under production load.

Frontend Development

- Built scalable Angular modules and reusable UI component libraries used across multiple internal applications.
- Implemented virtual scrolling and optimized Angular change detection strategies to support smooth rendering of high-volume data tables.
- Developed frontend features end-to-end using Angular, TypeScript, RxJS, NgRx, and Angular Signals, integrating REST APIs with comprehensive validation and error handling.
- Styled and structured responsive UI using HTML5, CSS3, and Tailwind CSS, ensuring consistent design across modules.

Production Support & Career Growth

- Investigated and resolved production defects spanning both frontend and backend modules, supporting multiple stable release cycles.
- Collaborated cross-functionally with senior developers and product stakeholders to translate requirements into technical implementation, following Git-based pull request reviews for code quality.
- Promoted twice within two years (Junior Software Developer → Junior Software Engineer → Software Engineer), recognized for consistent delivery, strong collaboration with the team, and steady growth in technical expertise.

Associate Software Engineer — Marketing Professional

Sep 2022 – Dec 2023

Webberax

- Planned and executed large-scale bulk email marketing campaigns using PMTA (Port25 Message Transfer Agent) on a dedicated IP, focusing on maximising inbox placement and reducing spam classification.
- Set up and managed complete mail server infrastructure: configured DKIM (DomainKeys Identified Mail), SPF (Sender Policy Framework), DMARC, and MX records to meet email authentication standards and improve deliverability.

- Performed inbox delivery validation by monitoring server logs, bounce rates, and blacklist status, diagnosing and resolving issues affecting campaign inbox rates.
- Maintained dedicated IP reputation through consistent sending practices, warm-up schedules, and volume management across campaigns.

PROJECTS

ULRS — Universal Loan Review System

Technologies: Angular, NestJS, MySQL, TypeScript, REST API

- Built an internal platform enabling loan officers to review, track, and approve loan applications through a structured workflow.
- Developed Angular UI modules for application review screens and NestJS/MySQL backend services to manage application state, approvals, and audit history.
- Optimized data table rendering for large volumes of loan records using virtual scrolling techniques.

OMN — Order Management System

Technologies: Angular, NestJS, MySQL, RxJS, REST API

- Developed order lifecycle management features, including REST APIs for order creation, status updates, and tracking.
- Built Angular components for high-volume order data tables with optimized change detection for smooth performance.
- Implemented validation and error handling across order workflows to reduce data entry errors.

TPS — Title Production Service

Technologies: NestJS, MySQL, Angular, TypeScript

- Contributed to a title production workflow system supporting document processing and status tracking.
- Built backend services for managing document state transitions and frontend components for tracking production status.
- Resolved production issues to support stable rollouts of new workflow features.

Screenate

Technologies: Angular, REST API, TypeScript

- Developed and maintained features for a screening/review application, integrating REST APIs for data retrieval and updates.
- Improved frontend performance through optimized rendering and reduced unnecessary re-renders.
- Fixed production bugs to support reliable day-to-day usage of the application.

CERTIFICATIONS

- Front-End Developer — Besant Technologies
- Embedded and IoT Programming — Tessolve

EDUCATION

B.E., Electrical and Electronics Engineering — PSNA College of Engineering and Technology, Dindigul

2018 – 2022

CGPA: 7.9

SKILLS

Frontend: Angular, RxJS, NgRx, Angular Signals, TypeScript, JavaScript, HTML5, CSS3, Tailwind CSS

Backend: Node.js, NestJS, Express.js, REST API Development, JWT Authentication, API Performance Optimization

Database & Data Management: MySQL, Prisma ORM, Sequelize ORM, SQL, Database Schema Design, Redis (Caching)

DevOps & Tools: Git (Pull Request Reviews, Code Collaboration), GitHub, GitLab, Jira (Task Management)

AI Tools: Claude Code, Codex, Antigravity, Gemini CLI
